

## CES Round-Up, Day 3

Below are press releases from companies in the Tokeneke semiconductor Universe posted since mid-day Tuesday organized by ticker symbol with hyperlinks to the documents via Yahoo!Finance. While today's list is mercifully short, apparently Wednesday is Off-the-Wall day at CES where companies make announcements of a different kind.

*Most Are-You-Serious?:* OVTI diversifying into LCOS pico-projector displays from CMOS image sensors. I have a call scheduled with management tomorrow on this one.

*Most Convoluted:* NVDA into automobile dashboards. What—your new SHIELD isn't different enough?

*Most Desperate:* ENTR enabling a kind of Emergency Broadcast System coming through your set-top box and out of your TV called Reverse-911.

I guess this is just what happens after three days in Vegas. And further proves the point that maybe some things should just stay there—in my opinion, just for the record.
